

## Information Technology Strategy

As an organization executes against its business objectives, it needs to ensure that information technology (IT) strategies align with business goals or else run the risk of misdirecting precious IT resources. IT Strategy requires a process and a framework. The former provides the steps and the latter the toolkit. Together they help an organization define an IT strategy that maximizes business value by ensuring that IT investment decisions have a strong, clear relationship with overall organization objectives.

An IT strategy sets direction for IT functions and helps to minimize ongoing support costs and maximize value from IT investments and expenditures. Because Invigorate Consulting specializes in bridging the gap between business and technology organizations, we are uniquely positioned to guide organizations through the challenges of crafting an impactful IT strategy, which requires an understanding of both technology and business objectives and landscapes. We help our clients by developing current and future state assessments of applications, infrastructure, architecture and staffing along with developing a roadmap for progress towards a desired state. Invigorate Consulting connects the dots within companies by defining and tracking a practical, measurable and achievable IT strategy which will create shareholder value through capitalizing on the return of IT investments.
